

Lab Exercise 1: OBSERVATIONS

```
<DOCTYPE html>
<html>
  <head>
    <title>My First Webpage </title>
    <meta charset="UTF-8">
    <meta name="author" content="My Name">
    <meta name="keywords" content="HTML, CSS, JavaScript">
    <meta name="revised" content="05-09-2022">
    <link rel="icon" href="icon.png" type="image/gif">
  </head>
  <body>
    <!-- Place content here -->
  </body>
</html>
```

Above is the code that was posted in our Laboratory Exercise 1. When you place this on an editor and change the filename into “.html”, no words are going to be present because of the restriction from the comment tag situated on the body and so in order for the code to work we need to remove the comment tag.

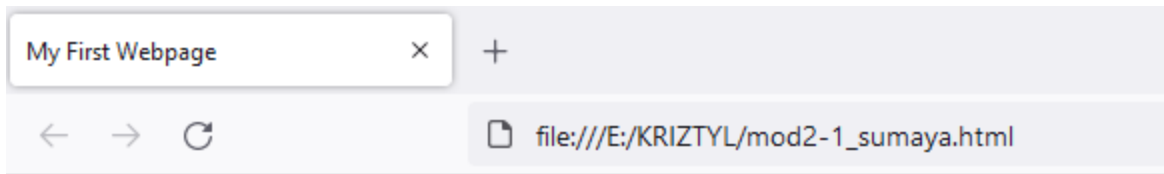

We were tasked to replace the text for line 12 into “This is a webpage. I love Computer Science.” and once it’s replaced, the text will finally show up when you open the file.

I also noticed that the Title of the Tab changed into our title placed which is the:
<title>My First Webpage </title>

I also noticed that when you look into the link of the said file, it is going to look like this:

file:///E:/KRIZTYL/mod2-2_sumaya.html

The link is related to where and which folder you placed them on and how you named the file. Those are all my observations.

This is a webpage. I love Computer Science.
